

MapQuest — The Alchemist Build Spec

Milestone Mapping, reimagined as a coaching quest

Prepared for: the dev team **Author:** Jon Hawkins (Milestone Mapping) **What this is:** the product concept + structure for turning Milestone Mapping into a gamified, story-driven coaching experience. Read this first, then open the three HTML prototypes in the bundle — they show the visual direction and the actual exercises.

1. The one-sentence pitch

A user enters thinking they're setting a goal. They walk a 14-chapter quest modeled on *The Alchemist*. By the end, they've hit a real, measurable milestone — and discovered the transformation (and life purpose) they were actually after the whole time.

The milestone is the **bait**. Transformation is the **catch**.

2. Why this works (the core insight)

The Alchemist uses "Personal Legend" — a mystical, unmeasurable calling. Our version uses **The Milestone** — countable and concrete (sell 200, launch the app, lose 20 lbs, make \$1M).

That measurability is the whole trick:

```
A measurable milestone → forces daily proof
Daily proof             → creates resistance
Resistance              → exposes a survival mechanism (a "mask")
The mask               → reveals the missing Essence
Essence                → produces clean action
Clean action           → moves the milestone
... and the loop repeats, chapter by chapter.
```

The player thinks they're playing a goal-tracker. They're actually being coached through identity transformation without realizing it until the end.

3. The three layers (and the three prototype files)

The product has three nested layers. Each has a prototype HTML file in this bundle.

Layer	What it is	Prototype file
The Journey	The 14-chapter Alchemist story arc the user walks. The emotional spine + the destination.	01_Diamond-Path_Story-Bible.html
The Engine	The 5 Shifts — the repeatable mechanic that fires at every wall in the journey.	02_5-Shifts_Engine.html
The Training	The 5 Shifts as actual hands-on exercises the user types into.	03_5-Shifts_Transformation.html

Mental model: The Journey is the *map*. The Engine is the *motor*. The Training is the *steering wheel the user actually touches*.

```

    THE JOURNEY (14 chapters, the story)
      |
    powered at every gate by ↓
      |
    THE ENGINE (5 Shifts mechanic)
      |
    which the user runs via ↓
      |
    THE TRAINING (interactive exercises)
  
```

4. The Journey — 14 chapters

Each chapter = a game stage. Each pairs a **story beat** (Alchemist parallel) with a **real coaching exercise** that runs there. The user plays a chapter; the system is running a coaching session.

#	Chapter	Alchemist parallel	Exercise that runs here
1	The Dream Under the Ruins	The recurring dream	Project Design From The Future / Futurability
2	The Cartographer Appears	Melchizedek names the path	The Milestone Formula (8 steps)
3	The First Trade	Selling the sheep	Declaration · Choice · Consequences
4	The City of Confusion	Robbed in Tangier	Managing Complex Change · Victim vs Responsibility
5	The Proof Forge	The crystal shop	Daily Proof · Power of Promise
6	The Comfort Trap	Going home richer, untransformed	Weekly Review · Red Flag Concepts
7	The Long Crossing	The desert caravan	Weekly Action Reset · Overwhelm Cycle
8	The Oasis of the Heart	Fatima at the oasis	Fill the Cup · Healthy Priorities · Back to Being
9		Learning to read omens	Self-Sabotage Patterns · Present Context

#	Chapter	Alchemist parallel	Exercise that runs here
	The Omen Becomes a Pattern		
10	The Shadow Gate	The horseman / war zone	Naming the Survival Mechanism (mask boss)
11	The Alchemist Within	The Alchemist teaches the heart	Back to Being · Powerful Stands
12	The Impossible Test	Turning into the wind	Being Before Doing · Responsibility
13	The Treasure Gate	The treasure, finally recognizable	Completion Reflection
14	The Return Home	Home, now legible	Life Purpose (the father's-wisdom reveal)

The ending (Chapter 14) is the whole point. It runs the Life Purpose exercise and delivers the reveal from Jon's book: *"I always thought I had a poor dad, but this whole time he was rich and I was the poor one."* The milestone they chased was never the treasure — their life purpose was home all along, like Santiago's gold buried where he started.

5. The Engine — The 5 Shifts

The recurring mechanic. When a user hits resistance at any gate, they run this sequence. It's also a standalone 60-min training Jon already delivers.

1. **Integrity** — the foundation. Call out your own bullshit (the lie → the cost → recommit). Without it, everything collapses.
2. **Alignment** — the GPS. Your values are a hierarchy that controls your time. Surface the real one vs. the one you wish you had.
3. **Identity** — the climb. "You don't rise to your goals, you fall to your identity." Survival → Awareness → Higher Self → Essence.
4. **Survival → Essence** — name the mask. Naming it shifts the brain from fear (amygdala) to choice (prefrontal cortex). "Name it to tame it."
5. **Coaching** — the mirror. You can't see your own masks; a coach (or AI) catches the blind spots.

The core mechanic inside the engine: Breakdown → Breakthrough

This is the single most important interaction in the product. It fires at the Shadow Gate (Ch 10) and any major wall:

1. FACE THE LIE — admit the story you've been telling yourself
2. FEEL THE COST — let the weight of it land (time, money, trust)
3. THE BREAKDOWN — let the emotion rise (the "super-saiyan moment")
4. THE BREAKTHROUGH — Declaration ("who I am") + Proof ("what I do today")

See it working interactively in [02_5-Shifts_Engine.html](#) (Part 02).

6. The masks (two layers each)

Five survival mechanisms. Each has TWO layers — this matters for the build:

- **Public layer (funny):** the Sales Mask — Crybaby Closer, Excuse King, Rebel Without Results, Zombie Knocker, Champion Quitter. Humor makes them safe to spot without shame. **Lead with these.**
- **Private layer (deep root):** the survival pattern underneath. This is the real coaching target. **Surface gently, second.**

Each mask maps to an Essence the user returns to:

Mask (funny)	Survival root	Essence return
Crybaby Closer	escape / numbing	Love
Excuse King	pain-as-identity / blame	Majesty
Rebel Without Results	rushing / no discernment	Joy
Zombie Knocker	the silenced voice	Radiance
Champion Quitter	collapse under pressure / scarcity	Power

Product note for the build: the dual layer should be a UI reveal — user sees the funny mask first, taps to reveal the root. The trauma-level material stays the *private design source*; the player-facing copy stays lighter. (Jon to decide per-surface how deep the root text goes.)

7. What to build first (suggested phases)

This is a recommendation — the team should size it.

Phase 1 — The spine (MVP) - Goal intake → reframe as identity ("become the person who...") - Capture **day-one snapshot** at Chapter 1 (replayed at Chapter 14 — the reveal) - The 14-chapter map as a visual progression (locked/unlocked gates) - The Milestone Formula exercise (Ch 2) as the first real interactive tool

Phase 2 — The engine - Breakdown → Breakthrough as a reusable component (it's already interactive in the prototype) - The 5 Shifts exercises (Integrity bullshit call-out, Alignment values-gap + triangle, Identity climb, mask picker) - Mask system with the two-layer reveal

Phase 3 — Proof + persistence - Daily Proof logging + streaks - Weekly Review - Connection map (completed milestones link visually — "the street is connected") - The Chapter 14 reveal: render day-one snapshot beside present self

Phase 4 — The coaching layer - AI Identity Coaching (pattern detection across sessions, blind-spot reports)

8. Data model (starting point)

See `mapquest-data-model.ts` in this bundle for the full typed version. Core shape:

```
type PlayerState = {
  goal: string;
  identityReframe: string;      // "become the person who..."
  dayOneSnapshot: string;      // captured Ch 1, replayed Ch 14 (the reveal)
  currentChapter: number;      // 1-14
  milestones: Milestone[];     // feeds the connection map
  dailyProof: ProofEntry[];    // streaks
  masksEncountered: Mask[];    // which survival mechanisms surfaced
  lifePurpose?: string;        // the Ch 14 output – the catch
};
```

The single most important loop in the whole product: **Chapter 1 captures `dayOneSnapshot` → Chapter 14 renders it beside who they've become.** That's the treasure-was-home reveal, and it's what makes the ending land. Build the snapshot capture early even if the reveal screen comes later.

9. Visual direction

All three prototypes share the system (use them as the design source):

- **Background:** near-black `#070b14` / `#080d19` (OLED-friendly)
- **Accents:** teal `#06b6d4` , amber `#ffa94d` , diamond-blue `#9fe3ff` , fire-orange `#ff7a45`
- **Essence colors:** Radiance `#ffd166` , Love `#f06a8a` , Joy `#7ad97a` , Power `#5b8def` , Majesty `#b67af0`
- **Type:** Fraunces (display serif), Inter Tight (body), JetBrains Mono (labels/data)
- **Feel:** cinematic, mythic-but-practical, diamond/phoenix identity, plenty of dark space
- **Atmosphere assets** in the coaching Drive folder: two dragon videos (Shadow Gate boss + Alchemist Within ascension), the Shift #3 identity triangle.

10. The files in this bundle

File	What it is
<code>00_MapQuest_Build-Spec.md</code>	This document
<code>01_Diamond-Path_Story-Bible.html</code>	The 14-chapter journey + exercise map + the ending
<code>02_5-Shifts_Engine.html</code>	How the 5 Shifts power the journey + interactive Breakdown→Breakthrough
<code>03_5-Shifts_Transformation.html</code>	The 5 Shifts as hands-on exercises (values triangle, mask picker, etc.)
<code>mapquest-data-model.ts</code>	TypeScript data model to scaffold from

Open the HTML files in any browser. They're self-contained.

The treasure was who they became.
